

Wiring Warranty

Your brand-new engine comes with a premade and tested wiring harness. All you need to do is connect up power and ground. Do not modify the wiring harness in any way. If you want to modify the harness in any way please call me so that I can talk you out of it! Any modifications of the wiring harness void the warrantee on the wiring harness. To verify the functionality of your wiring harness connect it to the engine and run the engine before installing the wiring harness into your aircraft.

If you modify your wiring harness and there is an issue you can send it back to us for repair at our shop rate (\$85/hr as of June 2019) or buy a new harness (\$365.65 as of June 2019), both are plus shipping.
